

Chapter 1 Exercise 3

School Info

Make a proper Launch screen with the program title and copyright info.

This app has 3 buttons and 2 labels. The location label is just a 1 line label. The other label is a multi line label with the city and state as a collage displayed. When a button with a college is pressed, the schools info appears in the multi line label. Make sure you code at least a couple of lines between the city and state. The label with the school info should start out empty. You can use the 3 schools shown or pick your on favorites.
