

Chapter 2 Exercise 7

Change

Make a proper Launch screen with the program title and copyright info.

This app takes in the amount of change in cents and calculates the maximum number of quarters, then dimes, then nickels and finally pennies, giving to have the smallest number of coins for change. Again, what two operations have you learned to calculate the amount of a given coin, then how much change is left?

Determine the number of buttons, labels and text fields needed. Determine how many constants and variables are needed, and what type they are. For the variables determine whether they are input, output or internal variables.
